13.2 Virtual Bluetooth mode

13.3 Bluetooth HID mode

13.4 Bluetooth SPP mode

13.5 Bluetooth BLE mode

13.6 Android input mode

13.7 Virtual serial port mode

14. Bluetooth Name Setting

Set Bluetooth name

Read Bluetooth name

The method of setting the Bluetooth name:

Scan the Bluetooth name barcode first, and then scan a barcode, this barcode will be set as the Bluetooth name.

※Note

- The name can only be set up to 16 bytes. If the name bar code exceeds 16 bytes, the scanner will only take the first 16 bytes as the Bluetooth name.
- The complete Bluetooth name includes Bluetooth name + protocol type, which only supports modifying the Bluetooth name. After modifying the Bluetooth name, the names of all Bluetooth protocols

have been changed. For example: if the Bluetooth name is set as Scanner, the name of Bluetooth HID is Scanner HID, the name of SPP is: Scanner SPP, and the name of BLE is Scanner BLE.

15. HID Setting

15.1 Allow long press button to enter HID search

15.2 Prohibit long press button to enter HID search

15.3 HID Keyboard pop up/hide

15.4 Disable double-click to pop up/hide HID keyboard

15.5 Enable double click to pop up/hide HID keyboard

16. GS Conversion Character Settings

16.1 Set GS conversion character

16.2 Turn off GS character conversion

17. Prefix and Suffix Settings

To add the prefix and suffix, scan to set the prefix or suffix first, and then scan the corresponding bar code (for the bar code see appendix), the maximum number is 32 bytes.

To cancel the prefix and suffix, scan to set the prefix or suffix first, and then scan to exit the setting mode.

Set prefix

Set suffix

18. Hide Barcode

To hide the barcode, scan the front part of the hidden barcode or the back part of the hidden barcode first, then scan the hidden digits, and hide the number up to 4 bytes.

18.1 Hide the front of the barcode

18.2 Hide the back of the barcode

Hide 1 bit:

Hide 2 bit:

Hide 3 bit:

Hide 4 bit:

19. Add Function Keys

19.1 Add a carriage return at the end

19.2 Add a newline at the end

%%SpecCode9D

19.3 Add carriage return and line feed at the end

%%SpecCode9E

19.4 Add Tab at the end

%%SpecCodeA2

19.5 Disable add at the end

%%SpecCode9F

20. Conversion to Uppercase or Lowercase

20.1 Cast to lowercase

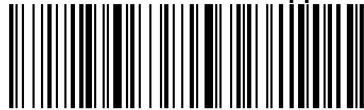

%%SpecCodeA3

20.2 Cast to uppercase

%%SpecCodeA4

20.3 Convert between uppercase and lowercase

%%SpecCodeA5

20.4 Disable convert case

%%SpecCodeA6

II. Function Mode Settings

This chapter can configure the function mode of the equipment, including working mode (such as image anti-white), Aiming Light setting, lighting configuration, LED indicator setting and beeper setting, etc. Kindly scan the corresponding configuration code according to the requirements in turn.

1. Working mode

7E9AA2

*Manual trigger mode

***Light on**

B66780

Light off

III. Output Configuration

This chapter can configure the output of the device, including entering/newline, add prefix/ suffix, fixed bar code length decoding, remove bar code number (start/end removal) and multi-country keyboard switching settings, etc. You only need to scan the corresponding configuration code as required.

1. Enter/Newline settings

7CC791

Add enter

7CC790

Cancel enter

7CC781

Add newline

7CC780

Cancel newline

2. Additional code settings

6787D1

Enable 2-bit additional code

6787D0

***Disable 2-bit additional codes**

6787C1

Enable 5-bit additional code

6787C0

***Disable 5-bit additional digits**

678791

All UPC/EAN codes must have additional codes

678790

***No additional codes are required**

IV. Bar code Configuration

This chapter can be used for bar code configuration, UPC/EAN, included Code bar code, Code39, Full ASCII Code39, Interleaved 2of 5, Code93, UPC-A, GS1 Data Bar Omnidirectional, GS1 Data Bar Expanded, PDF417, QR Code, Hong Kong 2of 5(China Post) and Airline 2 of 5 support bar code configuration, you just need to scan the configuration code as required. V. Prefix and Suffix Settings

Step:

1. Scan the setting code of Set Prefix or Suffix
2. Scan the corresponding setting code of "The Control Character Table"
3. Scan the corresponding "Escape Character Set"

Set Prefix

Set Suffix

PS: Read the "Set Prefix" or "Set Suffix" setting code and then read common barcode can clear all prefixes or suffixes.

Explanation:

The prefix and suffix table is divided into two parts, the control character table part and the visible character table part. The visible character table is mainly ASCII characters whose key value is greater than 31. These characters can generally be output directly through the HID keyboard without escaping.

The control character table is mainly the characters whose key value is less than 32. Most of these characters cannot be output directly through the HID keyboard. They need to be escaped to be output from the HID keyboard. This barcode scanner defines 5 escape methods, which can be switched by scanning the setting code to change different escaping methods. Customers can set the appropriate escape character set according to the needs.

Set Escape Character Set 0:

Set Escape Character Set 1:

Set Escape Character Set 2:

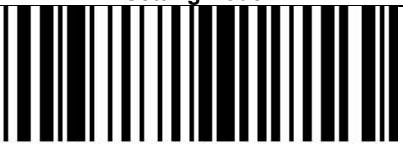

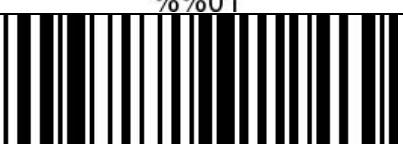

Set Escape Character Set 3:

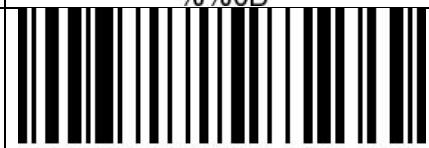

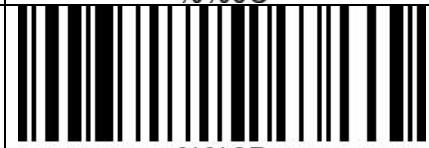

Set Escape Character Set 4:
